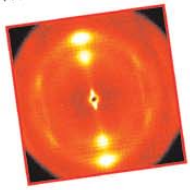
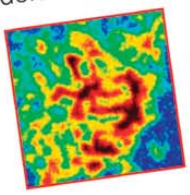
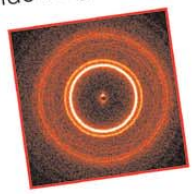
NANOSTAR – ENTER THE UNIVERSE OF NANOSTRUCTURE ANALYSIS

The NanoSTAR is the most versatile experimental platform for nanostructure analysis.

- Offers a wide field of applications for polymers, biological materials, fibres, metals, nanopowders and complex fluids, etc.
- Provides analysis of sizes, size distributions, shapes and orientation distributions in liquids, powders or bulk samples
- The efficient solution for scientists as well as researchers requiring fully automated measurements
- All-in-one instrument:
  - nanostructure analysis by means of Small Angle X-ray Scattering (SAXS)
  - nanostructure mapping by means of X-ray Nanography
  - molecular structure determination by Wide Angle X-ray Scattering (WAXS)







BRUKER ADVANCED X-RAY SOLUTIONS
